Jeff Anderson

PARTNER SOFTWARE ENGINEER | Reports to: Sharad Bajaj

Connect Nov 2025

Reflection Period: May 16, 2025 - Nov 18, 2025

Impact is **what** you accomplish - and **how** you do it matters just as much.

WHAT

What results have you delivered for your goals, keeping security, quality, and AI in mind?

HOW

How have your behaviors and actions led you, your team and Microsoft to excel, grow, and build trust?

Reflect on the past

What results did you deliver, and how did you do it?

Product and Feature Releases

- Brought Dataverse MCP Server from conception to preview. GA release currently rolling with targeted completion mid-December 2025.
  - Engaged from POC of initial tools through prototyping and helping flesh out eval pipeline
  - PPCC sessions successfully delivered with positive feedback from customers and partners
  - 1132 monthly active tenants with >200k monthly tool calls
- Brought F&O MCP Server from conception to preview at Ignite, GA timeline TBD based on feedback
  - Engaged in early POC of implementation.
  - Provided guidance and alignment during implementation and coordinating patterns between F&O and DV

    - 167 monthly active tenants across 238 environments, seeing a rapid uptick in the last few days as builds become available
- (Internal) Dataverse-Evals repo to unify datasets and evals
    - Initial creation and onboarding of primary datasets
    - Dogfooding of Dataverse Python SDK for loading
    - Engaged with Aurora team to enable pre-loading of test datasets in Aurora orgs
- Dataverse Python SDK
    - Provided initial POC and onboarding of team to workstream
    - Extremely rapid ~2 months from inception to preview release on PyPI, preview released yesteray (Nov 17)
    - Provided early dogfooding by using library in Dataverse-Evals repo

Customer Engagements

More limited this period. Still actively engaged with partners like Sunrise for random questions, as well as escalations which bounce between teams. Learning from these engagements included discovering a single point of failure in our ERP product dependency upon flighting, caught due to interaction with the customer Komatsu Forest. I have worked to ensure these learnings flow back to the owning team and result in product improvments.

F&O Platform

Continue to serve as a consultant to the F&O platform team, as well as staying engaged deeply with the application teams to help align understandings. Recent work includes the F&O licensing enforcement which is now live globally and designs for alignment of user/role across F&O and DV.

DV.Next

Leading discussions and POC's on what DV.Next should be. Current focus is on new primitives which are used to build the product (evals, playbooks, ontologies, glossaries) and how the product behavior changes from these primitives (RL/FT, semantic extraction).

Reflect on recent setbacks - what did you learn and how did you grow?

Getting the Dataverse MCP server to GA has felt a bit like trying to carry sand. The harder we push to nail down all possible issues, the more new issues pop up. This is somewhat the nature of extremely cutting edge things like MCP where even the spec is evolving. A concrete example is auth for third party clients like Claude. First the spec changed. Then when we implemented the spec we found bugs in both Claude and in Entra. In all these cases it's extremely difficult to predict these bugs since it's literally not possible to make some of the calls until an earlier bug is fixed, at which point we uncover more.

My key learning here is more aggressive early scoping. We ended up scoping Claude and MCP-Inspector out of GA late in the game, when we could have scoped them earlier even before we realized there were blocking bugs involved. This isn't new learning, we always focus on what the true minimum viable product is, but is additional feedback that we can be even more aggressive.

Manager comments

Jeff, you've had an impactful cycle in driving products and feature innovation. Taking Dataverse MCP Server from concept to preview and now pushing toward GA is a major achievement.
The adoption metrics with over 1,100 active tenants and 200K monthly tool calls show clear impact. You were deeply involved from the earliest stages, shaping POCs, building prototypes, and defining the evaluation pipeline. The PPCC sessions you delivered were well received and helped build confidence with customers and partners.

Your work on the F&O MCP Server is another highlight. Moving it from concept to preview at Ignite and ensuring alignment between F&O and Dataverse patterns demonstrates strong technical leadership and

collaboration. The rapid uptick in usage across 167 tenants and 238 environments reflects the momentum you've created.

On top of that, the Dataverse-Evals repo and Python SDK work was impressive. Getting the SDK from inception to preview in about two months shows speed and technical depth, and your early dogfooding helped validate the approach. These contributions set a strong foundation for our AI and agentic capabilities.

Customer engagements were more limited this period, but you stayed responsive and added value where needed. Your interaction with partners like Sunrise and Komatsu Forest helped uncover critical issues such as ERP dependency on flighting. You made sure these learnings flowed back to the owning teams, which is exactly the kind of feedback loop that improves product quality. Going forward, increasing proactive engagement as MCP adoption grows will help validate assumptions early and strengthen adoption.

You've played an important role as a consultant to the F&O platform team, providing guidance on licensing enforcement and alignment of user and role across F&O and Dataverse. These contributions help strengthen platform fundamentals and improve consistency across experiences. Your ability to bridge gaps and share historical context has been valuable for diagnosing issues and shaping future enhancements.

Your leadership in DV.Next discussions and POCs is setting the stage for the next evolution of the product. Focusing on new primitives like evals, playbooks, and ontologies and thinking through how these change product behavior shows strategic depth. Keep driving clarity here because these foundational decisions will influence the long-term direction of the platform.

I appreciate your honest reflection on the challenges with MCP GA. Navigating evolving specs and unpredictable bugs is tough, and you're learning around aggressive early scoping is spot on. Scoping Claude and MCP-Inspector out earlier would have reduced churn, and it's great to see you applying that insight going forward. This ability to adapt and improve execution in a fast-moving space is a strength.

Plan for the future

What are your goals for the upcoming period?

> **Goal #1. Copilot / AI**
>
> - Dataverse MCP server to GA
> - Expand cooperation with ATG and the Custom MCP Server Platform
> - Bring agentic search tools into the MCP server
> - Define the change management approach for MCP (not something we even understand as an industry yet)
> - F&O MCP server to GA

    - Focus on system protection and efficiency
    - Help the team investigate if we should expose a single orchestrator tool, or underlying tools
- DV.Next
    - Continue and expand POC's to build go-forward plan
- Python SDK to GA

Goal #2. Customer Engagements
Ongoing / as they arise
Customer escalations and success

Goal #3. F&O Platform

- Provide ad-hoc guidance and history to platform team on how things work
- Help fill gaps in diagnosing issues and designing features
- Suggest/guide future enhancements. Examples:
    - Unification of user/role
    - Licensing automation and moving deeper into platform
    - App insights / customer-visible telemetry / Chameleon
    - COGS improvements related to UDE environments and SQL costs
    - etc

Success measured by overall F&O Platform team success. ICMs, IPD, COGS, reliability, etc.

How will your actions and behaviors help you reach your goals?

Focus on rapid experimentation but with an emphasis on storytelling. The team is struggling to get a shared understanding of proposals in this high velocity space. Helping them internalize via high-quality POC's and simplifying understandings of how/why proposals work is vital. My focus will be on bringing clarity at a rapid cadence.

Manager comments

Your goals for the next period are well aligned with the priorities of the org and the direction we need to take. Driving MCP servers to GA, expanding cooperation with ATG, and bringing agentic search tools into MCP are critical steps. Your focus on DV.Next and Python SDK GA will help accelerate innovation and set the foundation for future capabilities.

I also want to call out the importance of embracing model-first development and helping teams adopt DRI Agents and SWE AI Agents to improve productivity through AI. These initiatives will not only streamline workflows but also position us to lead in building agentic experiences across the platform. Your ability to simplify complex ideas and make them actionable through clear POCs and storytelling will be key to driving adoption and clarity in these areas.

Keep leaning into rapid experimentation combined with clarity and alignment. Helping the team internalize proposals and understand the “why” behind them will make a big difference as we scale these new approaches. Partnering closely with other teams like ATG, Aurora, and F&O to ensure alignment on AI and agentic patterns will be critical for success.

Jeff, your approach of combining rapid experimentation with clear storytelling is exactly what this space needs. The team is operating in a high-velocity environment where shared understanding is critical, and

your ability to simplify complex ideas through high-quality POCs will help everyone align quickly. This behavior not only accelerates decision-making but also builds confidence across teams.

Your focus on model-first development and enabling adoption of DRI Agents and SWE AI Agents will drive productivity and set the foundation for agentic capabilities in our products. By leaning into hands-on guidance and creating clarity around why these changes matter, you will help the team internalize new patterns and embrace AI-driven workflows.

Partnering closely with other teams like ATG, Aurora, and F&O will amplify your impact and ensure alignment on priorities. These actions will help you deliver on your goals while strengthening collaboration and influence across the org.
